SKILLS

C
C++
FreeRTOS
ARM Cortex-M4
STM32
Altium Designer
SPI
I2C
UART
JTAG debugging
Oscilloscope
Logic analyzer
Linux
Bash
Python (unit testing)
Git

LANGUAGES

Bulgarian (native)
English (fluent)
German (intermediate)

EDUCATION

**B.Eng. Electronic Engineering,
Electronic Engineering**
Technical University of Sofia (TU
Sofia)
2016

Dimitar Petrov

MID-LEVEL EMBEDDED SYSTEMS ENGINEER

PROFILE

Embedded systems engineer with five years of experience developing firmware for sensor platforms and motor controllers. Skilled in C/C++, RTOS, ARM Cortex-M, PCB design and test automation.

EXPERIENCE

Mid-level Embedded Systems Engineer

TechNova Systems • Zürich, Switzerland • 2020 - Present

- Reduced firmware boot time by 35% through optimizing interrupt handling and moving non-critical initialization to background tasks.
- Designed and validated a sensor acquisition board that increased sampling rate from 1 kHz to 10 kHz while cutting power consumption by 20%.
- Led a cross-functional team of 4 engineers to deliver a production-ready motor controller firmware, supporting 500+ units/month.
- Implemented automated CI pipeline using GitHub Actions, cutting integration test time from 45 minutes to 12 minutes.
- Authored internal coding guidelines adopted by the Embedded division, decreasing bug escape rate by 40% over six months.

Junior Embedded Engineer

Embedded Solutions AG • Zürich, Switzerland • 2017 - 2020

- Developed firmware for temperature-logging IoT devices, achieving $<0.5^{\circ}\text{C}$ accuracy over a range of -20°C to $+80^{\circ}\text{C}$.
- Created PCB layouts for 4-layer boards in Altium, reducing board spin iterations by 30%.
- Wrote Python test harnesses that increased test coverage from 60% to 92%.
