

Ilze Bērziņa

Principal Data Engineer

Data engineering leader with 8 years of experience designing scalable pipelines, optimizing cloud costs, and mentoring junior engineers.

EXPERIENCE

Principal Data Engineer

Datu Labs – Riga, Latvia – 2022 - Present

- Designed a real-time ETL pipeline using Flink & Kafka that processes 3TB/day, cutting downstream latency by 90%.
- Led migration of legacy batch workloads to AWS, reducing infrastructure spend by €200k per year.
- Implemented automated data-quality tests (Great Expectations) that lowered erroneous records by 98%.
- Mentored a team of four junior engineers; team velocity increased 30% within six months.
- Authored internal data-catalog standards adopted across three product lines.

Senior Data Engineer

Baltic Data Solutions – Riga, Latvia – 2019 - 2022

- Built Airflow-orchestrated ETL jobs moving 500GB/day from PostgreSQL to Redshift.
- Optimized Spark SQL queries, cutting compute costs by 22%.
- Introduced CI/CD pipelines for data workflows using GitHub Actions.

Data Engineer

Latvian Telecom – Riga, Latvia – 2018 - 2019

- Developed Python scripts to ingest CDR data (≈2M records/day) into a data lake.
- Created dashboards in Looker that improved network-operations decision-making.

EDUCATION

MSc in Data Engineering, Computer Science

Riga Technical University (RTU) – 2020

BSc in Computer Science, Computer Science

University of Latvia (LU) – 2018
